Rain or shine, we’re making clean energy for you

When the “Sunshine State” lives up to its name, it’s a beautiful thing. But, we all know there are plenty of cloudy and rainy days here. That’s why at our Martin Next Generation Clean Energy Center, we’ve teamed up Florida’s sunshine with affordable, American-produced natural gas to deliver reliable electricity to you around the clock, in good weather and bad.

During the day, we take the sun’s rays and turn the solar energy into electricity to power your business. At night or when it’s cloudy, U.S. natural gas steps in to continue delivering clean energy you can count on. Learn how this first-of-its-kind idea is part of our ongoing work to change tomorrow for the better:

Working to keep your business running

We’re always working to strengthen power lines serving business thoroughfares and key community facilities like hospitals, 911 centers and water treatment plants to better withstand severe weather. See what work we’ve done near your business:
