

Earn Rebates with our Business HVAC Program

Thermal Energy Storage (TES)

Air conditioning your facility 24/7 can run up your energy usage and operating costs. If you have a large building or several buildings and are looking for a solution, we can help. Our rebates for qualifying Thermal Energy Storage (TES) systems can help offset the cost of your investment in this energy saving technology.

TES systems produce and store cold water or ice at night, when off-peak rates are lower, and use it to cool buildings more efficiently throughout the day, resulting in lower energy bills. The combination of TES innovation and time-of-use rates can lower your energy bill and provide you with a rebate on your new TES system.

Qualifications

Each TES system must meet efficiency guidelines to qualify for a rebate. To ensure all guidelines are met and determine the incentive amount, FPL needs mechanical drawings, schedules and equipment performance data (best source).

Benefits

- » Take advantage of less expensive time-of-use rates
- » Reduce energy demand
- » Reduce cost for large air-conditioning compressors
- » Environmental benefits
