

The business of keeping bills low

As you continue facing more and different challenges as a business owner, one constant will be FPL working to keep your bills low.

FPL has saved customers billions in operational costs by finding more sustainable and efficient ways to deliver energy that's not just clean and reliable, but also affordable. This doesn't happen by accident. Instead, it's the direct result of smart, long-term investments that reduce costs and improve efficiencies. Even as the price of many goods and services increases year after year — often with little to no warning — the price you pay for the FPL energy you use every day is lower than 15 years ago. And you can count on that reliable, clean energy at an affordable price for years to come, with bills remaining below the national average through 2025.

The innovations and investments of today set the course for Florida's energy future. We've ended the use of coal in Florida. We use American-made natural gas, making foreign oil a thing of the past. And we have a plan for a zero-carbon-emissions fuel made from solar and water, called green hydrogen. Building a sustainable energy future through investments in more fuel-efficient power plants, solar and energy storage drives down costs over the long term. Meeting Florida's growing needs while delivering you savings requires planning, preparing and investing, and we remain committed to providing our customers unparalleled value.

Now that's a future Florida, and you, can depend on.

Time-of-use peak hours change in April

If your business is on the time-of-use rate, don't forget on-peak hours have shifted. From April 1 to Oct. 31, on-peak hours are Monday through Friday from noon to 9 p.m., excluding Memorial Day, Independence Day and Labor Day. To learn more about time-of-use or other rates, visit: [» FPL.com/TOU](https://www.fpl.com/TOU)

Ready for 'spring trimming'?

We encourage all customers this spring to safely participate in the "spring trimming" of trees and vegetation before they get too close to power lines.

Trees and other vegetation are a leading cause of power outages. In fact, trees were the number one cause of outages during Hurricane Irma in 2017. Most of the outages were caused by trees from beyond the areas FPL maintains.

Property owners are responsible for safely maintaining their trees and vegetation on their property and keeping them away from power lines. Never trim vegetation that has grown near a power line but hire a qualified, specially trained line-clearing professional to do the job.

Stay safe. Always keep yourself and any object you are touching at least 10 feet from main and neighborhood power lines and 30 feet from higher-voltage transmission lines.

Property owners can help by following FPL's Right Tree/Right Place guidelines at FPL.com/trees to reduce the risk of vegetation causing power interruptions.

For more information, and to take our interactive quiz on trimming, visit: FPL.com/treequiz

Rates update

An adjustment to the fuel component of your bill was pending approval with the Florida Public Service Commission at the time of publication.

Where does your energy come from?

FPL's power comes from a variety of sources, including clean, U.S.-produced natural gas and emissions-free nuclear and solar. Today we're taking steps to substantially increase our investment in cost-effective solar while eliminating our use of coal.

Our latest fuel mix compared to the rest of the nation:

FUEL	FPL ¹	U.S. ²
Coal:	1.25%	23.4%
Oil:	0.09%	0.4%
Solar:	2.86%	1.7%
Natural Gas:	72.66%	38.4%
Nuclear:	21.52%	19.6%
Purchased Power:	1.62%	N/A
Wind:	0%	7.1%

¹ Sources of electricity generation for the 12 months between Jan. 2020 and Dec. 2020.

² Major energy sources and percent share of total U.S. electricity generation in 2019.
