Changing Florida’s energy today to help create a better tomorrow is important to all of us. That’s why, at FPL, we’re using U.S.-produced natural gas and our state’s very own sunshine to bring affordable clean energy to you.

In fact, in 2016, our new FPL Port Everglades Next Generation Clean Energy Center went into service. Because it uses less fuel than the old plant it replaced, it’s more than 90 percent cleaner and 35 percent more efficient. We also tripled our solar energy production by adding one million new solar panels. The new solar sites – FPL Babcock Ranch Solar Energy Center, FPL Citrus Solar Energy Center and FPL Manatee Solar Energy Center – have added approximately 225 megawatts to our solar portfolio and have joined our three existing solar energy centers. And, we’re not stopping there. This year, we’re continuing to do our part to advance clean energy in Florida by building several additional solar energy centers. See where we plan to build our new solar sites: FPL.com/solar

Ask the Energy Expert

Q How much can I reduce my energy bill by joining FPL’s “On Call” program?
   – William Z., Pembroke Pines

A When you volunteer to enroll in our On Call® program, you could save up to $137 a year. Learn more about how you can receive money back on your bill: FPLblog.com/OnCall
Resolving your power issue before the lights go out

We’re committed to building a stronger and smarter grid to provide energy you can count on in good weather and bad — and, we’re never done. We’re always working to improve the electrical system and investing in technology that helps improve service for you. Thanks to our smart technology, we’re able to detect and, in many cases, prevent outages before they happen.

Rate adjustments

Effective March 1, you will notice two rate adjustments on your energy bill. The first is a storm charge adjustment, which is adjusted up and down periodically during the year with the Florida Public Service Commission’s approval. This charge helps to pay for previous hurricane restoration costs and will change to $1.25 per 1,000 kWh for residential customers. The second adjustment is a temporary storm recovery surcharge included in the non-fuel charge, due to Hurricane Matthew that had a substantial impact on a large portion of our service territory last fall. Residential customers will note an increase of $3.36 per 1,000 kWh, and this charge will continue for a period of one year. View information about your rates: FPL.com/rates

Important safety tips for working outside

» Before beginning work outside, especially yard work using tools, ladders, or poles, always look up and note the location of power lines.

» Keep ladders and the ends of the tools you’re using more than 10 feet away from power lines.

» If you see a power line that is down or looks hazardous, call 911 and FPL at 800-4OUTAGE (800-468-8243).

New ways to keep you informed during an outage

You can now receive email alerts in the unlikely event your power goes out. Would you also like to receive text or voice messages? No problem! Simply update your preferences: FPL.com/alerts

Working with our communities

One of the ways we’re working with the communities we serve is to support STEM education programs like robotics. These programs help prepare students for exciting, high-paying jobs in the technical workforce. In many cases, they also help break down barriers and provide more opportunities for traditionally underserved populations.
